

Crystal IT Announces Funding Agreement with Global Security Capital Group

Agreement Provides Funding for Mission Critical Technology for Homeland Security Mission

Phoenix-- Crystal IT, one of the world's leading providers of computer based security solutions for the national security and homeland security markets, is announcing it has entered into a funding agreement with Global Security Capital Group, LLC (GSCG), a homeland security consulting and financial services firm. Crystal IT's Avert Access Control solution provides organizations with an enterprise-wide identity access management and endpoint security product that not only controls access to workstations but also manages multiple passwords throughout their environment. Uniquely inherent to Avert, each workstation *automatically* locks when an authorized user exits the immediate vicinity – ultimately protecting the sensitive data contained within the organization from a potential breach. GSCG is focused on providing unique financing to companies and agencies operating in the Defense, Homeland Security and National Security sectors.

The agreement formalizes a relationship between Crystal IT and GSCG. “This agreement with Global Security Capital Group provides Crystal IT with a competitive advantage in delivering our products globally. Along with its partners, Crystal IT can now provide its customers with mission-critical technology and the financial wherewithal to obtain its technologies quickly and cost effectively,” said Fred Kloecker, CEO, Crystal IT. Thomas Panuzio, CEO of Global Security Capital Group adds, "We are excited to be working with Crystal IT and its security partners. Their advanced security solutions combined with our funding capabilities will provide the ability to protect highly classified documents and data within a financially viable solution."

About Crystal IT. Crystal IT, Inc. is a leading developer, systems integrator and computer security solutions provider for governments, corporations, universities, and financial institutions worldwide. The company's proprietary enterprise access control and identity management software combines with leading-edge hardware to provide clients with differentiation that cannot be achieved by other vendors.
